

DIAGNOSTIC IMAGING

ADDITIONAL PET SCANNER OPERATIONAL**Date issued: August 18, 2023**

We would like to advise relevant health-care providers that Manitoba's second Positron Emission Tomography (PET) scanner began operations on August 15, 2023. The scanner is located on the 7th Floor of the John Buhler Research Center. Another PET scanner is also located within HSC Winnipeg in the HSC General building.

The operation of the second scanner provides increased capacity for PET scans in the province. Please continue to fax requisitions to 204-787-3300.

Both PET systems have an appropriate lab for dispensing radiopharmaceuticals used for imaging, and both locations have areas suitable for injecting patients with radiopharmaceuticals.
