# Manitoba Certified EMR Product

Change Proposal

CP-2018-02

Manitoba Certified EMR Product: Change Proposal Form

Change ID	**CP-2018-02**
Subject	Client Registry (CR) Query Service Interface for all Vendors of Certified EMR Products
Change Issued On	September 6, 2018
Change Type	☐ Urgent (Mandatory) ☐ Standard (Mandatory) **X** Proposal (Optional)
Change Summary	The CR Query Service interface facilitates EMR integration with the Manitoba Provincial Client Registry system via eHealth_hub. The CR Query Service provides clinics with a secure method to query and import client demographics from the Provincial Client Registry system.Vendors of Certified EMR Products will develop an interface via eHealth_hub to achieve certification of this new component. The interface to Client Registry is a foundational step to supporting the provincial vision for primary care delivery and information sharing. The output of this deliverable is the publication of a Specification and accompanying Assessment Guide for Vendors of Certified EMRs to achieve certification towards EMR Client Registry (active mode, or "read-only") integration through the eHealth_hub. This component is optional at both the Standard level of EMR certification and the Integrated level.
Reason for Change	This Change Proposal introduces an interface to the Provincial Client Registry for Certified EMR Products. Client Registry integration provides the EMR with trusted, verifiable client (patient) demographic information within the EMR. Within the next few years, Manitoba will enable sharing of essential clinical information about enrolled clients between their Home Clinic and providers from whom they seek episodic care. Client Registry Query Service integration lays the foundation for future clinical information sharing.
Modifications Required	EMR development as per the: • eHealth_hub – Client Registry Query Service Interface Specification • eHealth_hub – Client Registry Query Service Interface Assessment Guide
Implications of not implementing change	There is no impact to EMR Certification. However, incorporation of the CR Query Interface: • Lays the foundation for future information sharing; • Aligns with current and future Provincial initiatives such as Home Clinic Enrolment Service
Deliverables and Target Dates	**September 6, 2018** – Issue of Change Proposal

Change Response Date	**N/A. Please let your Product Lead know if you are interested in applying for this Specification.**
