

# Enrolment Service

Enrolment Service is a eHealth\_hub interface that provides the ability to enroll patients from within a Certified EMR. This service provides Home Clinics with an efficient method to manage client enrolment and submit the enrolment data to the Home Clinic Repository.

## What are the prerequisites to get this service?

You must be an active Home Clinic and have a Certified EMR Product that has achieved additional certification to the Enrolment Service. For information about home clinics refer to <https://sharedhealthmb.ca/health-providers/digital-health/home-clinics>. Please refer to the Manitoba EMR Certification Status table on the Shared Health website at <https://healthproviders.sharedhealthmb.ca/services/digital-health/pcis-office/manitoba-emr-certification/> to determine if your vendor has become certified to this service.

## How does it work?

A Digital Solutions Facilitator will work with the site to enable its interface and the Home Clinic Liaisons will provide an orientation and prepare you for the go-live.

This service is provisioned at the clinic EMR level. Configuration is done by the EMR Vendor support and enabled by Digital Health.

### Benefits of the Enrolment Service

- Improved accuracy and timelines of enrolment.
- Fewer enrolment rejections.
- Timely validation of enrolment data errors within the EMR.
- Up-to-date remediation notifications of conflicts in enrolment data delivered directly to the EMR.
- Discontinued manual entry in Home Clinic Portal to update enrolment records for clinics with shared EMRs.
- Discontinue manual entry in Home Clinic Portal to update enrolment records for clinics with shared EMRs.
