

EMR integrations that support enrolled patient care

Home Clinic Client Summary Service

What is a Home Clinic Client Summary?

A Home Clinic Client Summary is a document that contains an enrolled patient's key health information provided from the Home Clinic's Certified EMR. Client Summary documents will be available in the Clinical Documents tab of eChart Manitoba and will be accessible to authorized eChart users across the province in support of direct patient care.

What is the Home Clinic Client Summary Service?

The Home Clinic Client Summary Service is an eHealth_hub interface that provides a secure method to submit Client Summary information to eChart Manitoba from a Certified EMR. Home Clinics should understand where and how the Client Summary information is recorded in their EMR to support accurate and comprehensive Home Clinic Client Summaries are available.

See page 2 for the information included in the Client Summary and what triggers the information to be sent from the Home Clinic's Certified EMR.

Key highlights:

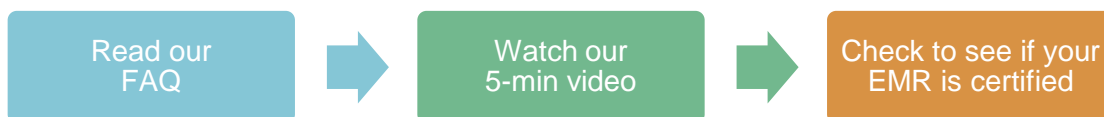

- Provides a secure method to submit Client Summary data to eChart Manitoba
- Reduces calls to your Home Clinic for basic patient information
- Provides other health-care providers with clinical information to support caring for your enrolled patients outside the Home Clinic
- Supports your Home Clinic's role of providing continuous, comprehensive care for enrolled patients along with supporting coordination of care with other providers
- Provides an opportunity to improve workflows that support strong data quality practices related to recording clinical information

How do I apply for the Home Clinic Client Summary Service?

Your Home Clinic must be using the Home Clinic Enrolment Service before using the Client Summary Service. Once your EMR is certified to both components, your Home Clinic can apply by visiting the [eHealth_hub_page](#) on the Shared Health website.

How do I learn more about the Home Clinic Client Summary Service?

Information included in the Home Clinic Client Summary

Clinical data for enrolled patients that you record and maintain in certain fields within your Certified EMR will now be sent to eChart Manitoba when triggered. The data elements involved and how they will be displayed are identified below:

The following **WILL** result in a Client Summary being triggered to be sent and/or updated in eChart:

- Adding or modifying information in one of the above-mentioned areas of the EMR
- Any changes made to the Most Responsible Provider Association for an enrolled patient

The following will **NOT** result in a Client Summary being triggered to be sent and/or updated in eChart:

- Changes to a **Home Clinic's** demographic data (name, phone, etc.)
- Changes to a client's Home Clinic enrolment, including termination of enrolment
- Changes to, creation of, or removal of other data elements such as clinical notes, forms, referrals, appointments, etc.
