

QUICK REFERENCE GUIDE

Medication / Fluid Involved

Click on **Add** to search and enter Medication or Fluid details

Med/Fluid Tips:

- For med/fluid not found, type in Brand name field rather than generic, ex TPN, LIPID, SMOF
- IV Fluids are easier found using Drug Classification field and typing “replacement” or “replacement prep” for search

Note: If Med/Fluid is not found in the database, enter “unknown” in generic name and include the med/fluid in Details about the Event

Medication Administered Search

Generic Name

- Can enter a portion of the name and click search
- If search returns "no data", enter unknown in this box, select and accept, include drug name in "additional information" field for follow-up

Brand Name

- Enter combination products
- Search for TPN, LIPID, SMOF in this box
- To tailor the search, type components like "potassium", "sodium", "dextrose" in this box
- Type Lactated Ringers – using "Ringers or LR" will not bring up any data
- Type Sodium Chloride to search for different % and combinations. Using "saline, normal saline Or NS" will not bring up any data
- Dextrose can be search by Brand or Generic name – using "D5W, D10W, etc" will not bring up any data

Note: Leaving "unknown" in Brand Name field, specific concentrations of components/drugs will not appear.

Type in med, then click search
