

Manitoba Tobacco Quit Card and Counselling (TQCC) Program

Information for clinics where a Tobacco Educator documents in a non-RHA EMR

Thanks for partnering with us in delivery of the Manitoba Tobacco Quit Card and Counselling (TQCC) Program! The program will launch on Nov 28th, 2022.

The MyHealth Team or ITDI staff member(s) who will be performing the role of Tobacco Educator for patients within your clinic are requested to input a small set of key data elements into the TQCC Program Data Collection Tool (see attached). **We would like to request that you please review the TQCC Data Collection Form and make it available within your EMR by Dec 21.** Only aggregate data will need to be provided to your RHA TQCC Lead. More information regarding reporting timelines will follow.

If the Tobacco Educator(s) are seeing patients in your clinic prior to that date, they may document on a paper copy of the Tool. Responses will need to be keyed into the live Tool when available (information contained in a copy hand scanned into the EMR will not be reportable).

When you input the Tool into your EMR **many of the fields need to be set up as reportable fields.** Fields that need to be reportable are **all fields except** the first 4 checkboxes on page 1 (on the eligibility criteria) and the last 5 checkboxes at the very end of the document (regarding how the individual would like to receive the 6-month survey).

More information on the output files requested will follow. You are encouraged to communicate with the vendor to get help as required and to check that the Tool and output files are correctly built.
