

VISUAL MANAGEMENT

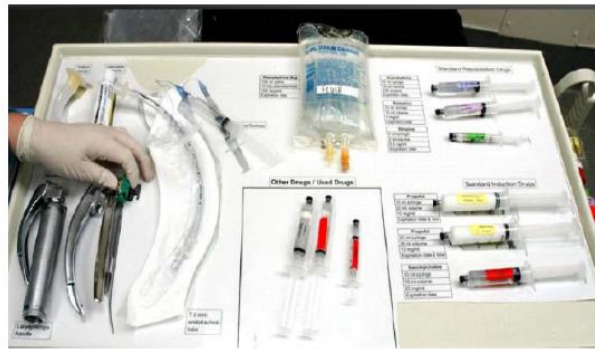

Visual management is a workplace organization methodology used to create, maintain, monitor, and improve a well-organized, clean, safe, and highly productive work area. Refer to the 5S one-pager for more specifics on that methodology.

Visual management:

- Reduces the non-value-added time spent searching and walking around to find items
- Reduces process delays caused by searching
- Helps control inventory levels to the optimal level
- Makes it so anyone can understand what to do

Left- Before Visual Management

Right-After Visual Management

Foot Printing is a technique where markings are drawn on the floor to indicate:

- Where things belong
- Where processes happen
- Direction of traffic
- Rules for navigation
- Safe and unsafe places to store items

A well-organized workplace increases efficiencies, reduces errors and creates a safer work environment for everyone.

**“A place for everything,
and everything in
its place.”**

Shared Health works collaboratively with our provincial service delivery partners to develop and deliver lean training to staff across Manitoba.
