Table 8. Adult parenteral antimicrobial dosage guidelines

| Antibiotic | Usual Dosages ^a |
|--------------------------|---|
| ANTIBACTERIAL AGENTS | · |
| Penicillins | |
| ampicillin | 1-2 g q4-6h |
| cloxacillin | 2 g q4-6h |
| penicillin G | 2-4 million units q4-6h |
| piperacillin-tazobactam | 3.375 g q6h |
| meropenem | 500 mg q6h |
| Cephalosporins | |
| cefazolin | 1-2 g q8h |
| cefoxitin | 1-2 g q6-8h |
| cefuroxime | 0.75-1.5 g q8h |
| ceftriaxone | 1-2 g q24h |
| ceftazidime | 1-2 g q8h |
| Fluoroquinolones | |
| ciprofloxacin | 400 mg q12h |
| levofloxacin | 500-750 mg q24h |
| moxifloxacin | 400 mg q24h |
| Macrolides | · |
| azithromycin | 500 mg q24h |
| Aminoglycosides | · |
| gentamicin or tobramycin | 80 mg q8h |
| Others | |
| clindamycin | 600 mg q8h |
| cotrimoxazole (TMP-SMX) | 10-20 mg/kg/day trimethoprim in divided doses q6-8h |
| metronidazole | 500 mg q8h |
| vancomycin | 1 g q12h or 15 mg/kg q12h |
| ANTIFUNGAL AGENTS | |
| amphotericin B | 0.5-1 mg/kg q24h |
| fluconazole | 100-400 mg q24h |
| caspofungin | 70 mg load then 50 mg q24h |
| ANTIVIRAL AGENTS | |
| acyclovir | 5-10 mg/kg/dose q8h |
| ganciclovir | 5 mg/kg/dose q12h |

^a Based on normal renal function in a 70 kg patient.

Table 9. Parenteral to oral conversion suggestions

| Parenteral Drug | Oral Therapy Options ^a |
|-------------------------|---|
| ANTIBACTERIAL AGENTS | |
| Penicillins | |
| ampicillin | amoxicillin |
| cloxacillin | cloxacillin or cephalexin |
| penicillin G | penicillin V |
| piperacillin-tazobactam | amoxicillin-clavulanate or cotrimoxazole (TMP-SMX) +/- metronidazole or ciprofloxacin +/- metronidazole |
| Cephalosporins | |
| cefazolin | cephalexin or cloxacillin |
| cefoxitin | cephalexin + metronidazole or cotrimoxazole + metronidazole or amoxicillin-clavulanate |
| cefuroxime | cotrimoxazole or amoxicillin-clavulanate or azithromycin/clarithromycin |
| ceftriaxone | amoxicillin-clavulanate or cephalexin or ciprofloxacin/levofloxacin/moxifloxacin |
| ceftazidime | ciprofloxacin |
| Fluoroquinolones | · |
| ciprofloxacin | ciprofloxacin |
| levofloxacin | levofloxacin |
| moxifloxacin | moxifloxacin |
| Macrolides | |
| azithromycin | azithromycin |
| Others | |
| clindamycin | cloxacillin +/- metronidazole or cephalexin +/- metronidazole or clindamycin |
| ANTIFUNGAL AGENTS | |
| fluconazole | fluconazole |
| ANTIVIRAL AGENTS | |
| acyclovir | acyclovir or valacyclovir |

^a Patients should be clinically stable, demonstrate clinical improvement, and be able to tolerate oral feeding and medications. Selection of oral therapy should be based on cultures and sensitivities. In absence of useful cultures, oral therapy may be selected based on potential pathogens, community- versus hospital-acquired infection, pharmacokinetics, spectrum of activity, and cost of each oral agent. Oral agents listed above represent those currently on the WRHA Formulary and does not represent all commercially available oral agents.

Table 10. Adult dosing recommendations in renal impairment^a

| Drug | (sugg | Creatinine Clearance (CrCl) in mL/min ^b (suggested dosage adjustment based on normal dose) | | | | | | |

or

Philippe Lagacé-Wiens, MD, FRCPC Medical Microbiologist, St. Boniface Hospital/Shared Health

^b To estimate creatinine clearance (CL_{CR}) (mL/min) use the following calculation normalized for a 72 kilogram person.

CL_{CR} male = (140-age) x 88.4 CL_{CR} female = 0.85 x CL_{CR} male

S_{FR} (µmoles/L)

Monitor serum concentrations.

DISCLAIMERS

This guide is provided as an educational resource for physicians and other healthcare professionals caring for patients at the Grace General Hospital. The authors of the guide have made every effort to ensure that the information contained in it was accurate at the time of publication. Users of the guide are encouraged to consult other references to confirm the information presented in it. The authors are not responsible for errors, omissions, inaccuracies, or the continued completeness of the information contained in the guide. The information in the guide should not be used or relied upon to replace the skill and professional judgment required to determine appropriate patient care and treatment. Also, the guide is not intended to replace or to be used as a substitute for the complete prescribing information prepared by each pharmaceutical manufacturer for their anti-infective agents. Because of possible changes in anti-infective indications, changes in dosage information, differences in patients' responses to therapy, newly described toxicities, drug-drug interactions, and other items of importance, reference to complete prescribing information is recommended before any of the anti-infective agents described in the guide are used.

HOW TO USE THE ANTIBIOGRAM PORTION OF THE GUIDE (Tables 1-6)

- The information presented in the antibiogram is intended only to guide initial empiric anti-infective agent therapy at the Grace General Hospital.
- Initial broad-spectrum empiric therapy should be focused to the most appropriate narrow-spectrum agent(s) based on the laboratory identification of pathogen(s) and known susceptibility patterns/results, if the situation permits.
- Consideration should be given to equally efficacious but less expensive anti-infective
 agents for empiric therapy or when streamlining of therapy is desired, if the situation
 permits.

SUGGESTED CRITERIA FOR IV TO ORAL ANTIBIOTIC CONVERSION IN ADULTS

- Clinical improvement of infectious signs and symptoms (e.g., temperature defervescence, decreased white blood cell count).
- Patient is clinically stable (excludes patients in the intensive care unit, patients with febrile neutropenia, or patients with life threatening infections).
- Patient can tolerate oral feeding and medications (bowel sounds, no diarrhea/nausea/ vomiting).
- For rapid step-down, choose agents with high bioavailability (e.g., clindamycin, cotrimoxazole (TMP-SMX), fluoroquinolones).
- If anti-infective agent susceptibilities are known, anti-infective therapy should be tailored based on available data

Table 1. In vitro activity of selected anti-infective agents tested against Gram-negative bacillia

| • | | | | | - | | | | - | | | _ | | | |
|---|------------|-----------------------------|-----------------------------|-----------|-------------|------------|-------------|-------------|-----------|-----------|------------|------------|---------------|-----------------------------------|----------------|
| | | Percent Susceptible | | | | | | | | | | | | | |

| Klebsiella/Raoultella spp. (30)° | | 87 | 90 | 7 | | | 90 | 93 | 100 | 100 | 93 | 90 | 83 | 80 | 80 |
| Proteus mirabilis (61) | 77 | 98 | 100 | n.d. | n.d. | | 100 | 100 | 100 | 100 | 90 | 93 | 89 | 84 | |
| Pseudomonas aeruginosa (153) | | | 90 | | | | | 90 | | 94 | 98 | 100 | 88 | | |

- ^a Isolates tested and reported are from all sources combined, with the exception of Escherichia coli (subdivided into systemic isolates and urine isolates); isolates were collected from 4nn 1 to Dec 31, 2021; data compiled according to the recommendations of the Clinical and Laboratory Standards Institute (CLSI) in their document M39-A4 (2014).
- b Cephalexin is only indicated for the treatment of uncomplicated lower urinary tract infections.
- Nitrofurantoin is only indicated for acute cystitis.
- d H. influenzae data obtained from isolates tested at Health Sciences Centre, Jan 1 to Dec 31, 2017. Sixty-one isolates were tested for Cefuroxime and 69 isolates were tested for Trimethoprim-Sulfamethoxazole.
- ° The current laboratory identification system is unable to differentiate Klebsiella oxytoca from Raoultella spp.

n.d. = no data – absence of data for certain drug-organism combinations reflects limitations of the testing method currently used by Shared Health Clinical Microbiology laboratories.

Table 2. In vitro activity of selected anti-infective agents tested against Gram-positive coccia

| • | | | | | - | | | _ | | | - | | | |
|---|------------|---------------------|-----------|------------|------------|---------------------------------------|-----------------------------|---------------------------|-------------|-----------------------------------|-----------|-----------|--------------|-----------------|
| | | Percent Susceptible | | | | | | | | | | | | |
| Organism (number tested): January through December 2021 = Not tested, not routinely reported, or not recommended | Penicillin | Ampicillin | Oxacillin | Vancomycin | Daptomycin | High-Level Gentamicin ^e | High-Level Streptomycin° | Erythromycin ^d | Clindamycin | Trimethoprim- Sulfamethoxazole | Rifampin° | Linezolid | Tetracycline | Nitrofurantoin' |
| Enterococcus spp. (262) | | 87 | | 98 | n.d. | 80 | 79 | | | | | n.d. | | 85 |
| Staphylococcus aureus (378) | | | 63 | 100 | 100 | | | 53 | 77 | 98 | 100 | 100 | 97 | 98 |
| Staphylococcus epidermidis (33) | | | 42 | 100 | 100 | | | 42 | 72 | 67 | 97 | 100 | 88 | 97 |
| Staphylococcus lugdunensis (59) | | | 100 | 100 | 100 | | | 88 | 88 | 100 | 100 | 100 | 98 | 100 |
| Streptococcus pyogenes (n.a.) ^g (Group A Streptococcus) | 100 | | | | | | | | | | | | | |
| Streptococcus agalactiae (162) ^h (Group B Streptococcus) | 100 | | | 100 | | | | | 60 | | | | | |

- ^a Isolates tested and reported are from all sources (surveillance isolates excluded), Jan to Dec, 2021 with the exception of Staphylococcus lugdunensis (collected from Jan 2020 to Dec 2021); data compiled according to the recommendations of the Clinical and Laboratory Standards Institute (CLSI) in their document M39-44 (2014).
- b Oxacillin accurately predicts the activity of all semi-synthetic penicillins, including cloxacillin, beta-lactam/beta-lactamase inhibitor combinations, cephalosporins, and carbapenems for Staphylococcus aureus and coagulase-negative staphylococci.
- Susceptibility to high-level gentamicin or high-level streptomycin indicates that these agents can be used in combination with a cell wall active agent (e.g., ampicillin or vancomycin) for synergy. Gentamicin and streptomycin should never be used alone as treatment for Enterococcus spo.
- d Erythromycin activity predicts the activity of azithromycin and clarithromycin for staphylococci and streptococci.
- Rifampin should NOT be used alone as treatment for infection.
- Nitrofurantoin is indicated for acute cystitis only.
- g n.a. = not applicable Susceptibility testing of Streptococcus pyogenes is not routinely performed as 100% are susceptible to penicillin. If treating infection in a penicillin allergic patient, contact the lab for testing of second line agents.
- h Streptococcus agalactiae isolates were obtained from vaginal/rectal swabs submitted for Group B Streptococcus detection to the Health Sciences Centre, St. Boniface Hospital, and Westman Laboratory in 2012.

n.d. = no data – absence of data for certain drug-organism combinations reflects limitations of the testing method currently used by Shared Health Clinical Microbiology laboratories.

Table 3. In vitro activity of selected anti-infective agents tested against Streptococcus pneumoniae^a

| | | | | Percent S | usceptible |) | | |
|--|----------------------|-----------------------------|-------------|------------|--------------|----------------|-------------|-----------------------------------|
| Organism (number tested) = Not tested, not routinely reported, or not recommended | Penicillin (oral) | Penicillin (intravenous) | Ceftriaxone | Vancomycin | Levofloxacin | Clarithromycin | Doxycycline | Trimethoprim- Sulfamethoxazole |
| Systemic Isolates (Blood + CSF) ^b | | | | | | | | |
| Meningitis (180) | | 83 | 96 | 100 | | | | 86 |
| Non-Meningitis infection (180) | 83 | 98 | 99 | 100 | 99 | 68 | 92 | 86 |
| Respiratory Isolates ^c | | | | | | | | |
| Non-Meningitis infection (40) | 78 | 95 | 98 | 100 | 100 | 68 | 83 | 80 |

- ^a For Streptococcus pneumoniae, different susceptibility breakpoints for penicillin and ceftriaxone exist depending on whether meningitis or a non-meningitis infection is being treated [CLSI, M100, 31" edition]. For penicillin, when treating a non-meningitis infection different breakpoints exist for oral and intravenous dosing. For non-meningitis infections, susceptibility to oral penicillin predicts susceptibility to amoxicillin. Oral agents are not appropriate for the treatment of bacterial meningitis.
- b Systemic isolates were obtained from patients across Manitoba as part of the SAVE Study between January and December, 2017. CSF = cerebrospinal fluid.
- c Respiratory isolates were obtained from patients at the Health Sciences Centre (HSC) and St. Boniface Hospital (SBH) between January and December, 2018.

Table 4. In vitro activity of selected anti-infective agents tested against Methicillin-Susceptible and Methicillin-Resistant Staphylococcus aureus isolates^a

| | | Percent Susceptible | | | | | | |
|--|------------------------|---------------------|-----------------------------------|--------------|-------------|--------------|-----------|------------|
| Organism (number tested) = Not tested, not routinely reported, or not recommended | Oxacillin ^b | Vancomycin | Trimethoprim- Sulfamethoxazole | Erythromycin | Clindamycin | Tetracycline | Linezolid | Daptomycin |
| Methicillin-Susceptible Staphylococcus aureus (241) | 100 | | 99 | 70 | 76 | 98 | | |
| Methicillin-Resistant Staphylococcus aureus (147) | 0 | 100 | 97 | 24 | 77 | 95 | 100 | 100 |

- ^a Isolates tested and reported are from all sources (surveillance isolates excluded), Jan to Dec, 2021; data compiled according to the recommendations of the Clinical and Laboratory Standards Institute (CLSI) in their document M39-A4 (2014).
- b Oxacillin accurately predicts the activity of all semi-synthetic penicillins, including cloxacillin, beta-lactam/beta-lactamase inhibitor combinations, cephalosporins, and carbapenems for Staphylococcus aureus.

Table 5. In vitro activity of selected anti-infective agents tested against anaerobic isolates collected from hospitals in Winnipeg^a

| | Percent Susceptible | | | | | | | |
|--|---------------------|-----------------------------|-----------------------------|-------------|-----------|---------------|--|--|
| Organism (number tested) = Not tested, not routinely reported, or not recommended | Penicillin | Amoxicillin- Clavulanate | Piperacillin- Tazobactam | Clindamycin | Meropenem | Metronidazole | | |
| Bacteroides fragilis (108) | | 93 | n.d. | 44 | 93 | 100 | | |
| Bacteroides thetaiotaomicron (37) | | 94 | n.d. | 14 | 97 | 100 | | |
| Prevotella bivia (54) | 7 | 100 | n.d. | 32 | 100 | 96 | | |
| Prevotella disiens (34) | 32 | 97 | n.d. | 18 | 100 | 100 | | |

a Isolates were obtained from WRHA hospitals between Jan 2019 and Dec 2020; data compiled according to the recommendations of the Clinical and Laboratory Standards Institute (CLSI) in their document M39-A4 (2014). n.d. = no data – absence of data for certain drug-organism combinations reflects limitations of the testing method currently

used by Shared Health Clinical Microbiology laboratories.

Table 6. In vitro activity of selected anti-fungal agents tested against *Candida* species collected from hospitals in Winnipeg^a

| | Percent Susceptible | | | | | | |
|--------------------------|--------------------------|--------------|------------|--|--|--|--|
| Organism (number tested) | Fluconazole ^b | Voriconazole | Micafungin | | | | |
| Candida albicans (33) | 100 | 100 | 100 | | | | |
| Candida glabrata (34) | 91 | n.d. | 97 | | | | |

- ^a Data obtained by testing a random sample of C. albicans and C. glabrata isolates from Health Sciences Centre and St. Bonifiace Hospital, collected between Jan 2017 and Dec 2018. Susceptibility interpretations are based on updated CLSI breakpoints (M60. 2nd Edition). Isolates tested and reported are from blood only.
- ^b For fluconazole, there is only a susceptible-dose dependent (SDD) breakpoint for *C. glabrata*. The percentage of *C. glabrata* isolates that tested SDD to fluconazole was 91%. Susceptibility of SDD isolates to fluconazole is dependent on achieving the maximum blood level possible (i.e., should use the maximum dosage regimen). Consultation with infectious diseases is recommended for further quidance.
- n.d. = breakpoints have not been defined for voriconazole versus C. glabrata.

Table 7. Adult oral antimicrobial dosage guidelines

| Antibiotic | Usual Dosages | Cost (\$) per day ^a | | | | | | | | |
|--|---|--------------------------------|--|--|--|--|--|--|--|--|
| ANTIBACTERIAL AGENTS | | | | | | | | | | |
