

Lexidrug - How to Search for a Medication

Watch “Conduct a Search” in [Getting Started](#) to learn how to search for a medication in Lexidrug.

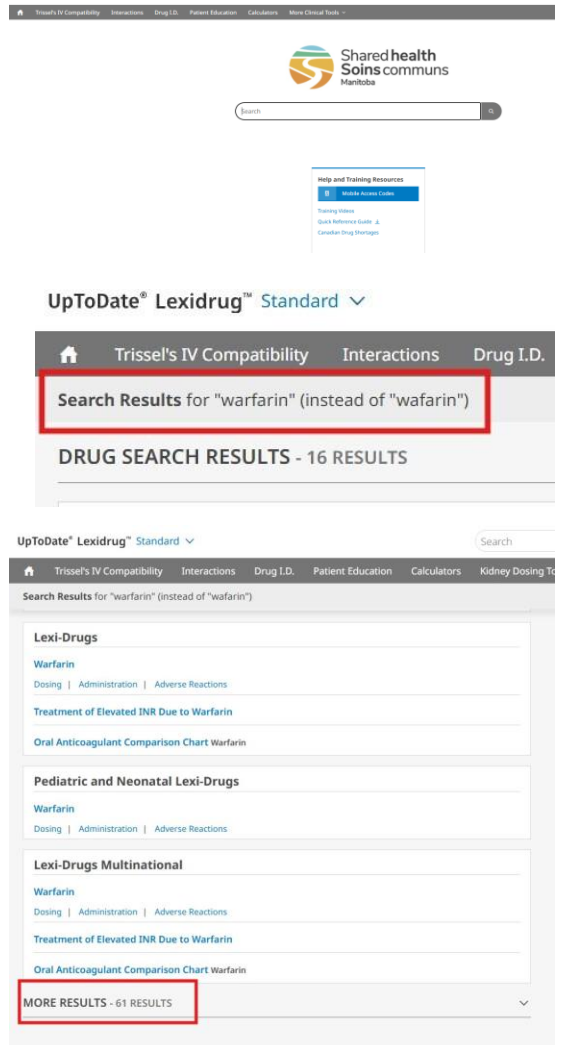

From the opening screen, enter at least 2 letters of any keyword (i.e., drug, lab, disease) in the search box.

Suggestions will appear and can be selected from the drop down or complete the keyword and use either the Enter key or click on the Search icon.

Lexidrug provides recommendations to support searches with misspelled keywords.

Select one of the search results.

The screenshots illustrate the search process in Lexidrug. The top screenshot shows the search bar with the text "Search Results for "warfarin" (instead of "wafarin")" highlighted in a red box. The bottom screenshot shows the search results for "warfarin" with a red box around the "MORE RESULTS - 61 RESULTS" link.
